

GOKULA KANNAN N

LINUX, CLOUD & DEVOPS SYSTEMS SUPPORT ENGINEER

Mobile: +91 9042716020 | Email: gkclouddevops@gmail.com

Professional Portfolio: linktr.ee/gk_cloud_devops

Location: Madurai, Tamil Nadu, India

Languages: English, Tamil

PROFESSIONAL OBJECTIVE

Result-oriented Computer Science Engineering graduate with 2+ years of corporate experience handling operations, high-pressure incident management, and client troubleshooting. Strong foundation in Linux (Ubuntu) environment administration, system performance optimization, cloud infrastructure provisioning, and production environment tracking. Technically proficient in automation scripting, microservices containerization, and configuring continuous delivery pipelines. Actively seeking a stable, long-term opportunity as a Junior DevOps/Cloud Engineer, Linux System Administrator, or Systems Technical Support Engineer to resolve production environment bottlenecks and maintain high infrastructure uptime. Available for immediate onboarding and 24/7 production support rotations.

TECHNICAL CORE COMPETENCIES

Linux OS Admin:	Ubuntu System Administration, Process Management (top, htop), User Access Control (chmod, chown, sudo), Storage & Filesystem Troubleshooting (df, du), Service Monitoring (systemd), Log Analysis, L1/ L2 Infrastructure Support
Cloud Infrastructure:	AWS EC2 compute instance provisioning, S3 bucket storage management, IAM access keys, VPC baseline architectures, Cloudflare DNS configuration & records routing (A, CNAME, MX)
DevOps & CI/CD:	Docker image lifecycle optimization, Docker Compose multi-container staging, GitHub Actions automated delivery pipelines, Git version control workflows (branching, merging, interactive rebasing, pull requests)
Networking & Web:	Nginx reverse proxy engineering, Virtual Hosts isolation, HTTPS/SSL deployment via Certbot automation, TCP/IP port mapping, Linux local firewall security rules, HTTP error state handling
Automation/Scripting:	Bash Shell Scripting for automated hardware utilization alerts, automated cron jobs for scheduled log rotation, routine backup maintenance, and automated service uptime checks

TECHNICAL OPERATIONS & SYSTEMS ENGINEERING PROJECTS

- End-to-End Automated CI/CD Pipeline & Server Deployment GitHub Actions, Docker, AWS EC2, Linux OS, Bash Scripting
- **Pipeline Automation:** Engineered comprehensive GitHub Actions workflows to fully automate the validation, build, and production deployment pipeline of containerized microservices.
 - **Container Orchestration:** Developed and managed lightweight Docker container lifecycles, securely provisioning sensitive infrastructure credentials using GitHub Secrets for automated push/pull registries to Docker Hub.
 - **Server-Side Provisioning:** Deployed applications onto targeted remote AWS EC2 instances via automated SSH environments; mapped operational shell scripts to safely flush legacy containers and spin up updated execution instances automatically.
 - **Production Support & Debugging:** Maintained maximum system uptime by actively troubleshooting container networking faults, port mapping collisions, and application runtime errors during mock deployment failures.
- Secure Web Infrastructure & Cloud Systems Deployment AWS EC2, Linux Systemd, Nginx Web Server, Cloudflare DNS, Certbot
- **Web Infrastructure Engineering:** Provisioned AWS EC2 cloud compute nodes and compiled optimized Nginx custom configurations to operate as high-performance, resilient reverse proxies.
 - **Security & Domain Orchestration:** Interconnected custom hostnames via Cloudflare DNS record management matrix and enforced complete end-to-end transport layer security (HTTPS) by deploying automated Let's Encrypt SSL certificates via Certbot automation.
 - **Systems Lifecycle Management:** Formulated custom system startup automation scripts to map necessary user folder permissions, initialize operational runtime dependencies, and monitor systemd service states.

- **Automated Monitoring Engineering:** Programmed robust Bash shell tracking scripts to autonomously track CPU utilization, memory allocation thresholds, and filesystem disk space capacity, trigger-alerting on exceptions.
- **Task Automation:** Scheduled cron daemon micro-tasks to perform routine system maintenance checks, log database compression dumps, and handle automated log rotations during off-peak windows.
- **Isolated Network Verification:** Built multi-container staging architectures on local Docker bridge networks, testing internal port mapping rules, firewall rules, and network isolation policies to prevent exposure vulnerabilities.
- **Version Control Discipline:** Maintained absolute code integrity using advanced Git version control operations, including manual merge conflict isolation, interactive rebasing, and repository state rollbacks.

CORPORATE PROFESSIONAL EXPERIENCE

Senior Business Development Executive (Technical Client Operations)

Jul 2023 – May 2024

Clarisco Solutions

Madurai, India

- **Incident & Requirement Management:** Managed high-pressure client interactions, evaluating detailed infrastructure and architectural delivery specifications for production-grade blockchain SaaS solutions.
- **Cross-Functional Systems Alignment:** Partnered closely with internal software engineering groups and systems deployment teams to map business logic matrices into highly optimized product architectures.
- **Data Operations Analysis:** Synthesized critical product operation summaries, system requirements metrics, and conversion data to assist executive leadership in optimizing service workflows.

Business Development Executive (IT Solutions & Account Management)

Mar 2022 – Jul 2023

WeAlwin Technologies

Marai, India

- **Technical Stakeholder Engagement:** Acted as a central technical point of contact, scoping client infrastructure needs, evaluating post-implementation issues, and maintaining continuous client trust loops.
- **Workflow Optimization:** Re-engineered internal response workflows and proposal documentation strategies, successfully accelerating technical solution delivery by 25% and boosting user satisfaction scores by 20%.

EDUCATION & CREDENTIALS

Bachelor of Computer Science and Engineering (B.E.)	Sethu Institute of Technology	2016 – 2020
Master of Business Administration (MBA)	Madurai Kamaraj University	2022 – 2024

Professional Certifications: DevOps System & Cloud Infrastructure Bootcamp • Linux System Administration & Server Infrastructure Workshop • Production Systems Engineering • Python 101 Basics Foundation

Awards & Availability: Recipient of the "Best Outstanding Performer Award" for outpacing operational goals by 120%. Immediate joiner; fully open to 24/7 technical rotations and on-call shifts.
